

When I had first heard about this issue was happy to hear that BPL was finally getting a start. Being a High Speed Data user, I would love to receive the data speed that I require at a better price then currently offered on the open market.

After having reviewed the extensive data collected by the American Radio Relay League (ARRL), I have to change my thoughts on BPL and the impact that it will have on Ham Radio Operators. Myself being a Ham Radio Operator would not wish to see what precious radio spectrum that we possess in the High Frequency range destroyed or made unusable by this new technology.

If in the future it were possible to filter out the emissions that BPL makes beyond the wires that carries it, I would vote YES for BPL. As it currently stands, it would do nothing but make High Frequencies unusable.

Sincerely,
Thomas P. Walker, JR
